**THERE IS LIGHTING.
AND THERE IS
ZUMTOBEL LIGHTING.**

We are passionate about designing and producing light that empowers humans and brings architecture to life. We continuously push the boundaries in our search for perfection through timeless design, technical excellence, superb craftsmanship and efficient performance.

We know that light can create the right environment for people to thrive. Light can spark our imagination, stir our emotions and create spaces that inspire.

As we develop the next generation of lighting, we consider more than the obvious. Our lighting is designed for you and your individual aspirations. We guide you into a new world of opportunities.

Zumtobel. The Light.

PARTNER FOR PARTNERS

Our goal is to improve the quality of life through light.
In everything we do, people take centre stage.
For this reason, partnerships have always been very
precious to us. Every day we strive to be an agile,
responsible and experienced partner that makes
a valuable contribution to humans.

AGILE

As an agile partner, we understand that there is more than just one way to reach a goal. We take the wishes of our partners seriously. That is why we offer exceptional luminaires ('The Specials'), which are developed to be out of the ordinary. Innovation, versatility and individuality are three values that are upheld in our company. Our Digital Services turn 'Connected Architecture' into a learning ecosystem. With sustainable, flexible and future-proof lighting solutions.

RESPONSIBLE

As a responsible partner, it is important for us to be reliable and trustworthy. We strive to act with the necessary transparency towards our customers, suppliers and partners and to operate in a sustainable manner. For us, sustainability is more than energy saving. We are guided by the triple bottom line that helps us move towards a regenerative and sustainable future.

EXPERIENCED

As an experienced partner, we have built upon our deep lighting and application expertise. Our aspiration is to deliver premium in every respect: be it in the quality of our luminaires, consultancy services, planning or our general services. We readily share our knowledge and offer various training programmes for our customers and partners. Our Active Light concept gives us the necessary framework to offer the best solution for humans.

UNIQUE LIGHT. PROVEN STANDARDS.

Intuition and experience. Vision and cutting-edge expertise. Innovation and curiosity. We combine outside-the-box thinking and established processes to create bespoke lighting solutions for our customers. Whether design, architecture, construction, lighting design, product management or marketing – our experts work across disciplines and brands to develop trend-setting bespoke lighting solutions. Our goals: responding to current market requirements, translating our customers' wishes into tailor-made lighting solutions and, last but not least, transforming today's innovative ideas into tomorrow's product portfolio.

Like a celestial body in the room:
The multi-award-winning AMBITUS office luminaire combines aesthetic design and highly developed lighting technology to create an extraordinary light experience.

VISIONARY

Daylight is never static. High-quality artificial light reflects the dynamics of daylight – and changes to suit the living spaces and architecture around us. From digitalisation and immersive experiences to sustainability and New Work: current trends inspire us to constantly reinvent light, while agile processes help us to create unique lighting solutions for future challenges.

INDIVIDUAL

We welcome requests that are a little bit different and customers who inspire us to expand our luminaire portfolio. From the first idea, the technical concept and design to the sample construction, prototyping and series production, we support and manage the entire product life cycle of innovative lighting solutions, all from a single source.

EXTRAORDINARY

Using aesthetic design, high-quality materials and innovative technology, Zumtobel brings together extraordinary product features to create unique light experiences. We work with design, lighting design and engineering experts who question what is tried and tested in order to design something special.

CREATING LIGHT CREATES TIMELESSNESS

Sustainable architecture needs human-centred lighting: at Zumtobel, we take a holistic view of light – and tailor it to people’s needs. This includes timeless design, future-proof technology and components that can be easily recycled or reused for new applications. Our goal is to create buildings that can be used flexibly with smart technologies and ultimately transform from a static building to a learning ecosystem. Active Light and ‘Connected Architecture’ are Zumtobel’s keys to human sustainability.

sustainability.zumtobel.com

**ACTIVE
LIGHT**

People in focus

Our Active Light concept adapts Zumtobel luminaires and solutions to people's needs. Dynamic applications and new technologies allow us to achieve a quality of light that is inspired by natural daylight and therefore also sustainable.

**CONNECTED
ARCHITECTURE**

**Value creation for
a strong future**

'Connected Architecture' enables us to use building technology as a basis with which to transform a building into a learning ecosystem, thereby increasing its value and ensuring its long-term profitable and sustainable operation, but without losing sight of users' needs in the process.

**HUMAN
SUSTAINABILITY**

Buildings for future generations

Human sustainability is based on the concepts of 'Active Light' and 'Connected Architecture'. At Zumtobel, our aim is the long-term conservation of natural resources – for the benefit of people, animals, plants and the whole planet. To achieve this, we not only focus on resource consumption during the usage phase, but also on reducing it before and during the construction phase. A sustainable building also has an additional function as a temporary storage facility for the resources of future generations.

ACTIVE LIGHT FOR SUSTAINABLE LIGHT QUALITY

We've developed the Active Light concept with the aim of designing artificial light that meets people's needs. It focuses on the connection between humans and light. It's designed to reconcile the fundamental need for light with the increasing

demands of modern times. Active Light is based on natural light and is activated as soon as a person moves from outside to inside. Light affects people with its intensity, direction and colour, and as it changes with the time (of day). It's these

four dimensions of light that Active Light uses to put all three impact levels – visual, emotional and biological – into practice.

[sustainability.zumtobel.com/com-en/
our-sustainability-dimensions/active-light](https://sustainability.zumtobel.com/com-en/our-sustainability-dimensions/active-light)

Visual effects of light

The visual lighting effect describes the functional support of the visual task by light, which is regulated at the workplace by standards such as DIN EN 12464-1 'Lighting of workplaces'. Visual tasks should be well supported, by preventing glare, for example. The level of the light effect helps create perfect visual conditions by enhancing contrasts and structures. Different visual tasks require different types of lighting conditions, which are defined in the standards.

Emotional effects of light

'Translated' by the limbic system, light influences our mood. Light stimuli determine the impact our surroundings have on us and thus our emotions. People will find a room pleasant if light, architecture and furnishings are in perfect harmony. This harmony triggers positive emotions. Surprise effects and variety, created using dynamic lighting controls, can be conducive to creativity and communication.

Biological effects of light

The biological effects of light are felt in the retinal ganglion cells. These receptors contain the photopigment melanopsin, which is activated by low-wave spectrum light (blue light). Through the release of the hormone melatonin, the system supports the circadian rhythm and other human bodily functions. The right kind of light at the right time can therefore support alertness, sleep quality and the ability to concentrate and perform.

**CONNECTED ARCHITECTURE:
VALUE CREATION FOR A STRONG FUTURE**

Light creates value: and not just for sustainable companies, but also for their customers. 'Connected Architecture' and digital applications and services allow building data to be measured and therefore be improved. Buildings become learning ecosystems that

are continually being tailored a little more closely to people's requirements and sensory experiences, while also conserving resources. Zumtobel lighting solutions create real added value in any situation.

*[sustainability.zumtobel.com/com-en/
our-sustainability-dimensions/connected-architecture](https://sustainability.zumtobel.com/com-en/our-sustainability-dimensions/connected-architecture)*

Wasserhaus St. Arbogast (temporary light installation) | AT

**Connected buildings:
smart not static**

'Connected Architecture' uses the lighting infrastructure as the basis for smart building infrastructure. Luminaires are fitted with sensors that collect and analyse a variety of building and environmental data, including brightness, presence, temperature and air quality. This data can be used to regulate environmental conditions, ensuring that energy is used efficiently. At the same time a pleasant atmosphere for users is created, which has a direct effect on the quality of life.

**Digital Services:
added value for specific
usage situations**

Building data is the perfect starting point for improving the customer and employee experience, optimising processes and saving time and resources. Zumtobel's Digital Services allow data that has already been collected to be used to create added value. Across all sectors, these transform big data into concrete business and usage models. An example is asset tracking, which enables objects to be located quickly

and efficiently in buildings. Its possible uses range from tracking goods shipments in the logistics sector, finding parts during a complex manufacturing process, and tracing high-quality, mobile work equipment or vehicles to locating medical devices in hospitals.

More information about our digital services can be found on page 166.

SERVICES AND TOOLS FOR SUSTAINABLE LIGHT

Light as a Service

LaaS (Light as a Service) is an alternative to buying a lighting system. Instead of requiring a one-off investment, the new lighting system can be used subject to the payment of monthly light contracting instalments. A costly LED retrofit can thus be carried out quickly, usually without the need for any investment. At the same time, a valuable and profitable contribution to sustainability is made, because, in addition to the reduction in CO₂ emissions, electricity costs are saved immediately. Furthermore, a modern lighting infrastructure also creates the basis for smart, digital building management.

EPDs: ensuring that environmental impact can be measured and planned for building certifications

As early as the 2010s, Zumtobel was one of the first luminaire manufacturers to make EPDs available to its market partners. An Environmental Product Declaration outlines the environmental impact of a product during its entire life cycle as part of the ecological building assessment in accordance with DIN EN 15978 ('Sustainability of construction works'). In-depth data compliant with ISO 14025 and EN 15804 serves as the basis for environmental certifications for sustainable construction.

sustainability.zumtobel.com/en/our-sustainability-dimensions/services-and-tools

Futurium, Berlin | DE

ecoCALC software

ecoCALC is Zumtobel's tool for analysing the costs of a lighting solution across its entire life time. To do this, ecoCALC not only calculates the investment costs, but also takes into account CO₂ emissions, power consumption, maintenance costs and system disposal. The software integrates the relevant EPDs and uses them as a basis for calculating the LENI (Lighting Energy Numeric Indicator), an important guide value for lighting efficiency in the energy assessment that must be provided for a sustainability certification.

Building certifications

Various Green Building certifications enable the sustainability of buildings to be measured and compared. Among the best known are BREEAM and LEED. Customers seek Green Building certifications in order to increase a property's value and marketability, reduce operating costs and provide evidence of the building's sustainability. We help our customers to obtain the desired Green Building certificates with intelligent lighting solutions and the relevant data (such as EPDs, for example).

EcoVadis

At a company level, the Zumtobel Group has been awarded a gold medal for its achievements by the EcoVadis sustainability rating agency. This means that the Group belongs to the top three percent of over 75,000 companies evaluated. The next step on our path to achieving net-zero is to increase the proportion of renewable energies that we use by at least 50 percent compared to the benchmark year, 2015/2016.

Zumtobel's success is not based solely on the sale of luminaires.

In fact, we aim to create lighting solutions that deliver real added value for your respective area of application. Whether in industry, in the office, in educational establishments, shops or museums, our motto is always 'application first'. Based on this, we traditionally share our in-depth knowledge of light in its usage situation through many channels. We thus contribute to optimising work processes, increasing building value, improving health and well-being and enhancing productivity – and creating truly sustainable buildings with light.

Office	28
Education	32
Industry	36
Health & Care	40

CREATING LIGHT CREATES IMAGINATION

Expand your horizons and discover new worlds – art and culture offers all this, and more. However, the impact of these personal experiences is also always dependent on the place at which the person encounters them. That's why it's even more important to adapt lighting not just to the work or performance, but also to the architecture that surrounds it. These are all factors that impact the identity of the work, how the space is experienced and the immersive nature of that experience.

1

ACTIVE LIGHT

To actively experience art is to look simultaneously into the past, the present and the future. With Active Light, Zumtobel not only takes into account the visual effects of light and its influence on the perception of art, but also supports museum visitors emotionally – because light contributes significantly to the atmosphere and design of a building or room.

CONNECTED ARCHITECTURE

Connected building architecture, intelligent controls and gentle lighting technology supplied by Zumtobel help fulfil visitors' expectations and requirements. State-of-the-art lighting infrastructure by Zumtobel provides the basis for 'connecting' art and cultural buildings in terms of the Internet of Things (IoT), whether presence data for optimal visitor guidance, recording of environmental data to preserve the art objects or asset tracking to secure and track valuable exhibits.

HUMAN SUSTAINABILITY

Sustainable lighting solutions can preserve the original beauty of art and culture for many generations to come. At the same time, exhibition spaces, which are often housed in historic buildings, must also be preserved for posterity as effectively as possible and with only minimal intervention through lighting technology. Preventing damage and preserving cultural heritage are at the heart of all Zumtobel's sustainability efforts.

CREATING LIGHT CREATES EMOTIONS

Light gives retail spaces a stage – and creates buildings in which customers like to spend longer and consume. To ensure retail architecture is both durable and sustainable, Zumtobel focuses its lighting concepts on people, creating immersive, individual and emotionally engaging shopping experiences. Using a smart building management system based on the lighting infrastructure, Zumtobel provides the best prerequisite for the sustainable optimisation of energy consumption and business operations in the retail sector and for addressing target groups with offers tailored to their requirements.

1

ACTIVE LIGHT

The retail spaces of the future will turn shopping into an emotional experience. With human-centric lighting tailored to the specific usage situation, light not only supports consumers in their visual tasks and orientation in the retail space. It also has a stimulating effect on the limbic system, awakens desires and guarantees a feeling of all-round well-being.

CONNECTED ARCHITECTURE

Recording environmental data, analysing requirements and using resources effectively: with a detailed knowledge of target groups, retailers can offer customised products and personalised shopping experiences, such as an in-store navigator who guides customers to the items they are looking for or to a customer-specific offer, for example. Zumtobel creates the technical prerequisite for connected buildings and smart applications in retail with a state-of-the-art lighting infrastructure that integrates sensors directly at the POS.

HUMAN SUSTAINABILITY

Zumtobel is committed to the highest quality when it comes to light and design: its durable lighting technology not only enables retailers to operate efficiently and thus contribute to reducing CO₂ emissions. Zumtobel also makes retrofitting easy and ensures that the lighting can be flexibly adapted to the presentation of the goods. For example, light in the retail spaces of the future will be able to constantly present the goods in different and surprising ways in order to capture customers' attention – and guarantee the successful use of retail spaces for decades to come.

CREATING LIGHT CREATES INSPIRATION

Sustainable office architecture and the associated lighting solutions focus on the needs of users and take a holistic approach to lighting quality. Zumtobel uses light and smart building technology to increase the added value of office buildings, while simultaneously ensuring that working and environmental conditions are always better adapted to people: for improved well-being, higher productivity and an atmosphere that supports creative exchange. Light is the common denominator for decarbonisation, profitable business activity and human sustainability.

ACTIVE LIGHT

Light in the office has a visual, emotional and biological effect. Adapted to the specific user situation, light supports glare-free screen work and makes communication spaces into meeting places for creative discussions. Active Light is based on the dynamics of daylight and thus supports our natural biorhythm – for maximum performance, motivation and visual comfort.

CONNECTED ARCHITECTURE

Improving the quality of indoor spaces, getting the best use out of workplaces and using resources effectively: Zumtobel uses state-of-the-art lighting infrastructure to create the technical requirements for a connected office building that is continually learning. Operating costs are optimised, while smart applications ensure the working environment can be measured and improved. From the individual lighting controls to agile office layouts: users' needs are front and centre in an environment designed just for them.

HUMAN SUSTAINABILITY

Zumtobel not only delivers future-proof lighting technology and uses Environmental Product Declarations to provide the necessary data for decarbonisation and sustainability certifications. With its human sustainability approach, it also ensures the long-term use of valuable resources in the office building. The unifying element of light balances human and ecological objectives for people and their working environment.

CREATING LIGHT CREATES CONCENTRATION

Today's education and knowledge transfer are the basis for tomorrow's success. Future-proof schools, universities and educational establishments create spaces in which people can acquire knowledge independently, interact with teachers and school or university peers and experience learning as a positive, lifelong process. Light is part of the room's ambience and thus directly influences the knowledge acquisition process: concentrate, be productive and stay productive.

KLASSE
2

1

ACTIVE LIGHT

Light in education and research has a supportive effect on a visual, emotional and biological level. Adjusted to the specific situation of the learners, light supports individual productivity in the lecture theatre and classroom or creative discussion in the seminar room. Human-centric lighting is based on the dynamics of daylight and thus supports our natural biorhythm – for maximum concentration, motivation and visual comfort.

CONNECTED ARCHITECTURE

Successful learning is supported by the right light at the right time, in combination with all of people's senses. Zumtobel uses state-of-the-art lighting infrastructure to create the technical requirements for a connected educational building. Smart applications ensure that the learning environment can be measured and optimised – and thus contribute to economic and sustainable management. From individual lighting controls to an agile seminar room layout: the needs of the learners are front and centre.

HUMAN SUSTAINABILITY

Learning processes require excellent lighting technology, whether in a retrofit or a new building, in order to create the perfect visual conditions and ensure well-being. Environmental Product Declarations (EPDs) provide the necessary data for sustainability certifications. Human sustainability means using resources as sparingly as possible and over the long term, while seeking a balance with human needs. This balance of economy and environmental protection creates the basis for a sustainable educational building that can be successfully used for years to come.

3

CREATING LIGHT CREATES PRECISION

Lighting is also proving itself to be as adaptable as the innovation and transformation processes associated with 'Industry 4.0'. Whether in the automotive, logistics or metal processing industries, Zumtobel creates lighting solutions for industry and technology that are not only efficient, safe and robust, but are also perfectly adapted to people's needs and individual activities – digitalisation is not a technological end in itself, but connects architecture in order to offer truly tangible added value for the environments in which users work and live, for a harmonious balance of human well-being, economy and ecology.

1

ACTIVE LIGHT

Light in industry takes into account people's visual, emotional and biological needs. Innovative sensor technology enables activity-based lighting that automatically adjusts to the usage situation and specific visual tasks. Closely reflecting the dynamics of daylight, Active Light supports our natural biorhythm to ensure maximum safety, motivation and visual comfort. Especially in shift work, light supports precise and high-quality output.

CONNECTED ARCHITECTURE

The right light at the right time, sufficient oxygen and, depending on the time of year, the right amount of heating or cooling: Zumtobel uses state-of-the-art lighting infrastructure to create the technical requirements for a connected production ('smart factory'). Smart applications ensure that the working environment can be measured and optimised – and thus contribute to economic and sustainable management, from the tracing of goods (asset tracking) to employee safety (people tracking).

HUMAN SUSTAINABILITY

Zumtobel is known in the industry for robust and resistant luminaires that last. Environmental Product Declarations (EPDs) provide very transparent data that can be used for sustainability certifications, for example. Human sustainability means reducing resource consumption during a building life cycle that is as long as possible while also optimising light and room parameters for the employees, especially during challenging shift work – for a harmonious balance of light, economy and ecology.

industry/sustainability](https://www.z.lighting/en/industry/sustainability)

CREATING LIGHT CREATES RECOVERY

In order to provide hospitals and rehabilitation facilities with future-proof light, Zumtobel places patient well-being and the medical personnel's complex visual tasks front and centre. Static buildings can be retrofitted to become smart working and living spaces on the basis of a lighting infrastructure that uses resources transparently and cost-efficiently. Healthcare architecture also remains fit for future requirements thanks to state-of-the-art Zumtobel lighting technology, which can be easily retrofitted and updated.

ACTIVE LIGHT

Active Light, our holistic approach to light quality, creates visual comfort during doctor visits, improves patient well-being and makes work in the operating theatre extremely efficient. Light supports targeted recovery and mental health as well as precision and concentration – whenever and wherever doctors, patients and care staff need it. As an essential and dynamic element, light revitalises interior design thus promoting recovery processes and quality of life ('healing architecture').

CONNECTED ARCHITECTURE

Using state-of-the-art lighting infrastructure, Zumtobel creates the technical basis for connected healthcare buildings. Recording environmental data and closely analysing requirements creates enormous added value: buildings can be adapted precisely to the needs of the users while operators benefit from optimised energy and resource consumption. The architecture becomes an adaptive system that consistently functions better for people and the environment.

HUMAN SUSTAINABILITY

Only when human needs are combined with a high commitment to sustainable building can the creation of health centres, hospitals and care facilities that will serve many generations to come become a reality. Human sustainability is not only concerned with decarbonisation (CO₂ reduction) – patients, persons needing care and staff should also feel comfortable spending time in the building. The balance of ecological objectives and human needs are a key factor in the creation of a long-term sustainable building.

VIVO II

Perfectly coordinated variety.

VIVO II not only impresses with its uniform design: the values that it encapsulates are unparalleled. For the first time, the electronics are fully integrated into the housing or track. With its remarkable collection of designs, the range is suitable for even the most challenging of lighting tasks. High lumen packages in small, compact designs, three different sizes, accessories that make tasks more flexible and technology that is easy to adjust on-site. A range made using environmentally friendly production processes and recyclable materials. A talented all-rounder for perfect lighting arrangements in an array of application areas – from the retail sector to the field of architecture.

SCENO

Impactful product presentation.

Showcase products perfectly. With clever accents for shelf lighting and restrained contrasts between light and shadow, SCENO captures and gently guides customers' attention. Ideally suited to the sales psychology of supermarkets and retail spaces. Highly versatile and adaptable to a range of spaces and uses. With brilliant, precise light and subtle design. SCENO: a stimulating atmosphere for every purchase.

TRACKS

The basis for your lighting solutions.

Zumtobel offers an extensive range of tracks and accessories to help you create the perfect infrastructure for spotlights, linear luminaires and wallwashers. Various ceiling and wall mounting options offer more scope for creative design. The use of DALI in the tried-and-tested 3-phase track enables digital lighting control. The miniaturisation effect is topped off by the slimline low-voltage tracks. A particularly compelling argument at the moment: in order to conserve resources, tracks are simply reused when lighting is upgraded.

“The comprehensive planning tool is based on the poetic idea of stringently miniaturising the spotlight heads, enabling them to be perfectly integrated into a continuous linear structure. The system magically emits light from a slender groove.”

Design: E00S

reddot winner 2020

SUPERSYSTEM INLINE

Linear design with excellent glare control.

Whether surface-mounted, suspended or integrated in baffle ceilings without using tools: uniform and glare-free light with a UGR value < 19 and 2000 lumen per running metre make SUPERSYSTEM inline an EN 12464-2011-compliant light line for workplaces. Three different lengths and the option of combining linear luminaires with recessed downlights for brilliant accents offer creative freedom. The luminaires are ideal for baffle ceilings and come with springs for Haufe ceiling systems as standard.

SUPERSYSTEM II

Modular system for versatile lighting.

First class. Linear. Everlasting. A system establishes itself as a lighting tool for all facets of architectural lighting. An interdisciplinary approach to properties and space. From even surfaces to lively accents. Both horizontal and vertical. Always compact, elegant and extremely flexible. And so freedom becomes a pleasure for the lighting designer – no matter the kind of challenges posed by the architecture or application.

PANOS INFINITY/EVOLUTION

Kits for functional and architectural lighting tasks.

The wide range of models perform different lighting tasks brilliantly – from the homogeneous illumination of vertical or horizontal surfaces to the creation of precise accents.

The unobtrusive manner in which both downlights and wallwashers blend in with their architectural surroundings makes the PANOS infinity / evolution kits the perfect lighting tool for designers and planners. From reception areas, corridors, offices and conference rooms to shops and museums – the luminaires provide the right lighting for any environment, thanks to impressive efficiency and service life, colour rendering of up to $Ra > 90$, precision-moulded reflectors and a future-proof modular design.

zumbel.com/panos

"I don't think light is just about a quantity of lumen. Sometimes light is about the full sky falling into a room or space."

MICROS II

A small luminaire with a big impact.

MICROS II – a small luminaire featuring state-of-the-art lighting technology for ancillary areas in retail, the hotel and catering sector, hospitals and living areas. The downlight's different colour variants offer a huge amount of scope for creative design. Yet MICROS II also allows one-to-one replacement of old small downlights, which still use halogen bulbs, for example.

DIAMO

Brilliant lighting quality for the creation of powerful accents.

DIAMO, which incorporates unique lighting technology developed jointly with experts at Bartenbach GmbH, based in Aldrans near Innsbruck, is a highlight in the world of miniaturised recessed luminaires: intelligently designed reflectors ensure accurate light distribution by the high-power and efficient LED modules, without any spill light, as well as perfect glare control. The result: high-intensity pinpoint accent lighting with excellent lighting quality and maximum brilliance. DIAMO combines all these features in an extremely compact design, thus providing for new creative freedom in numerous indoor applications.

SLOTLIGHT INFINITY II

SLOTLIGHT – the unique light line since 1999.

Improved optics, timeless design, maximum efficiency and even greater project design freedom: SLOTLIGHT infinity II is continuing the success story of Zumtobel's light line. It can be unrolled to any length, without interruption, as a continuous line or around corners, in a creative X or T shape. Conceived using Zumtobel's Circular Design Rules, it can be configured in just a few clicks, with effortless customisation. Whether in an office, educational institution, airport, art gallery or shopping centre: SLOTLIGHT infinity II provides a reliable basis for any number of applications. With IP54 degree of protection and emergency lighting in all standard lengths.

ONDARIA II

Beautifully recreating nature.

The timeless design of the ONDARIA II luminaire perfectly complements a variety of different room concepts. Whether recessed, surface-mounted or as a pendant luminaire – the clear geometry enhances the architecture without detracting from the interior styling. This makes it just as attractive for reception and waiting areas as for break-out zones or general lighting in a retail environment. With its round shape, the luminaire can be positioned anywhere in the room without changing its direction, while maintaining the same quality of light.

AMBITUS

The harmony of opposites.

AMBITUS has it all. A claim that this exceptional office luminaire lives up to in every way: advanced technology meets multiple-award-winning design. Diffused indirect lighting meets precise, workplace-friendly direct lighting. Peak brightness meets excellent glare control. AMBITUS unites apparent opposites in a slim, deep-drawn aluminium body that floats in the space with a light and delicate appearance, creating a lighting effect as round as the luminaire's shape itself. Harmonious light, inspired by the sun.

zumbel.com/ambitus

AMBITUS

"Purely linear lighting can no longer meet the needs of complex, organic building design. AMBITUS solves this geometric paradox."

Design: Yorgo Lykouria,

MELLOW LIGHT EVOLUTION

The daylight classic.

It is a well-known fact in architecture: The bigger the cubic content, the more difficult it is to guide daylight into the inner areas. MELLOW LIGHT plays with light. It brings the depth of the room to life in the mellow colours of the sky until late at night. Walls and ceilings begin to breathe and give people a renewed sense of outdoor freedom.

"By taking into account the design elements of the previous five generations of MELLOW LIGHT luminaires, we used this iconic feature to shape the future of office lighting."

Design: Daniel Stromborg
Design Director, Gensler

CAELA

Lighting system with edge-lit LED technology.

The common origin of the extraordinarily slender CAELA product group is a standard surface-mounted fitting, which – depending on the model – is developed into a round or square luminaire with a symmetric or asymmetric beam.

This enables each luminaire to be mounted to the ceiling and wall without additional accessories. Furthermore, there is the possibility of changing the luminaires at a later time, thus switching to a different size, beam or shape.

zumbel.com/caela

“To achieve a preferably trimless and clear design, the casing takes a back seat and lets the emitting surface act as a plane. Several CAELA luminaire elements can be shaped into versatile light sculptures.”

Design: Graft

CIELUMA

A canopy of light.

Like a canopy of light above our heads. In unrivalled dimensions: spanning entire areas, the CIELUMA light ceiling imitates outdoor daylight. In line with the Double Dynamic Lighting concept, it brings dynamic, motivating light indoors. With its sound-absorbing properties and host of design options, CIELUMA brings to life a new quality in the connection between light, acoustics and space.

zumbel.com/cieluma

CIELUMA / CIELUMA acoustic
square (up to 75x4.90m),
round (up to diameters of 4.90m),
free-form in accordance with customer requirements

"CIELUMA directly engages the senses: I love the fact that a perfectly homogeneous luminous ceiling transforms a room into something else. The user feels like they are standing outside under the sky. It's magical."

Design: Dr Thomas König CEO, Typico GmbH

MIREL EVOLUTION

The most progressive shape of louvre luminaires.

MIREL evolution represents a further stage of development for the louvre luminaire. Zumtobel has met the challenge of integrating energy-efficient LED technology into the tried-and-tested design by giving the luminaire an original appearance: users can actually see the LED modules in the MIREL evolution. With a clear and discreet design that can be used universally, the luminaire fulfils its great potential for light quality and energy efficiency.

LINETIK

Impressive lighting comfort in a striking design.

The minimalist and linear design of the LINETIK range is easy to integrate into any architectural concept. With a cross-section of just 25 x 25 mm, LINETIK is the slimmest professional office luminaire on the market. No other product that satisfies the required standards can compete with these dimensions – and no other product boasts such a consistently linear concept with cables that transfer electricity and data directly to pendant luminaires. LINETIK strikes the perfect balance between room and workplace lighting. This powerful solution with zero glare offers full compliance with all the requirements of EN 12464. The individually adjustable direct and indirect components allow you to adjust the light to suit your specific space and situation with complete freedom and flexibility.

HIGH-BAY LUMINAIRES

CRAFT II

124

CRAFT II

The Power Pack that lasts.

CRAFT II – is not just two powerful new high-bay luminaires. CRAFT II is more than that: it's the first generation of Zumtobel high-bay luminaires based on the platform principle. Not a fixed stand-alone solution, but a tailor-made system. Maximum performance. And perfectly adapted to the requirements of the relevant operation.

zumbel.com/craft2

CRAFT II performance
The robust lightweight

CRAFT II plus
The unbeatable power pack

Sustainably produced, powerful in action: housed in a lightweight yet sturdy sheet steel housing, the CRAFT II performance is a highly efficient high-bay luminaire. Extremely versatile thanks to six different light distribution curves. And with housing "Made in Germany", in a zero-carbon production process.

Protective shield made from a single mould: CRAFT II plus is created using the aluminium die-casting process. The luminaire is distinguished by its impressive resilience and revolutionary thermal management – even when faced with challenging ambient temperatures and extreme mechanical or chemical stresses.

M, L

M, L
Surface-mounted, pendant, recessed, TECTON continuous row, light channel
IP69, LABS-compliant
- 40 to +70 °C

CRAFT II

Revolutionary thermal management.

The CRAFT II plus uses two fundamental principles of physics, the Venturi effect and the Coandă effect, to cool and clean itself. The result: the innovative high-bay luminaire is in a completely different class from its predecessor model and can withstand high ambient temperatures (up to 70°C) – throughout its entire life time of around 100,000 hours. To achieve this, CRAFT II plus relies on an intelligent interplay of air pressure, air speed and air temperature. And all in an aluminium housing with excellent thermal conductivity.

zumtobel.com/craft2

1

Self-cleaning thanks to the Coandă effect.

The Coandă effect is a principle of physics used in the aviation industry and applied to CRAFT II plus: a pressure imbalance presses the airflow against the curved surface of the luminaire. This efficiently cools the LED boards in particular. At the same time, the airflow also removes everyday dust from the surface of the luminaire.

2

Efficiently cooled thanks to the Venturi effect. Specially designed nozzles in the body of CRAFT II plus generate negative pressure – and thus ensure that the air circulates at a high speed between the LED drivers and LED boards. The so-called Venturi effect cools the CRAFT II plus luminaire very efficiently and allows the power pack to be operated even at extremely high ambient temperatures.

PERLUCE

Both simple and stable.

Luminaires with extra protection are used when the primary requirement placed on a fit-for-purpose lighting solution is better protection and simpler maintenance. PERLUCE is a closed lighting system that sets new standards in terms of everyday usability and combines this with a variety of optics, protection classes up to IP54 and various models. Its deliberately utilitarian materials are reflected in its functional design. Its plain, unpretentious stylistic idiom gives precedence to the architecture of the room: light, not the luminaire, is the centre of attention.

AMPHIBIA

Built to resist.

Both on land and in water. Both powerful and durable: 'amphíbios' is an Ancient Greek word meaning 'both kinds of life'. True to its name, the AMPHIBIA moisture-proof luminaire offers excellent light output in challenging industrial applications. Dust-tight and protected against splash water. Temperature-resistant as well as resistant to chemical and mechanical influences. A robust product family for versatile tasks.

LUMINAIRES WITH EXTRA PROTECTION

COESA

Quality lighting for quality control.

Intelligent machines are increasingly replacing manual labour, yet people are still crucial when it comes to quality control. Why is that? The human eye has the unique capacity to check for subtle flaws and irregularities on different surfaces. However, detailed inspections can only be performed effectively in optimal ambient conditions – making quality lighting an essential part of the surface inspection.

EXENEO

Future-proof explosion protection.

Developed for the most adverse environmental conditions in potentially explosive atmospheres (zones 1/21). Resistant to moisture, dust, gases and extreme temperatures: EXENEO combines a strong protective housing with optimal thermal management as well as state-of-the-art LED technology. A modular design that looks to the future: all the components can be individually replaced and upgraded. Smart installation, simple maintenance and optimised life time included.

EXENEO – the future-proof ATEX-certified industrial luminaire.

 ZUMTOBEL

LITECOM

LIGHTING MANAGEMENT SYSTEM

LITECOM

Next-generation lighting management.

LITECOM offers a wide range of interfaces and control units for a variety of applications, rooms and people. From traditional momentary-action switches and touch panels for wall installation to apps and web-based user interfaces.

Clear and self-explanatory for seamless commissioning and intuitive daily use. By means of various interfaces, LITECOM can be easily connected to other systems.

zumbel.com/litecom

Certified DALI-2 system	Venetian blind control with protective functions

LITECOM infinity

LITENET

Flexible lighting management system.

With LITENET, the optimum utilisation of daylight is a simple task. The amount of daylight currently available for each room is calculated by using data from a central daylight sensor, and the difference between the actual value and target value is continuously supplemented with artificial light. Blinds are controlled accordingly to prevent excessive heat and glare but nevertheless let through as much diffuse daylight as possible. The system can be adjusted to suit individual needs at any time. LITENET is particularly suitable for system sizes of up to 10,000 luminaires or Venetian blinds.

zumtobel.com/litenet

LITENET flexis

BASICDIM WIRELESS

State-of-the-art lighting controls do not need cables.

Luminaire and app. No extra cables. No additional control components. The basicDIM Wireless lighting controls for individual rooms adapt effortlessly, whatever the situation – whether in a new building or an existing space, for additional luminaires or a lighting conversion. Even sensors and wall switches can be integrated easily and wirelessly. basicDIM Wireless can also be combined with LITECOM by means of a DALI gateway, so that emergency luminaires can also be monitored wirelessly, for example.

RESCLITE PRO App

The RESCLITE PRO app makes emergency lighting planning a breeze: After only 3 clicks, the chosen mounting distances between two luminaires and those for the wall are displayed for the chosen mounting height. An article number is displayed automatically and linked directly to the data sheet for further information. The app is available as a homepage for laptops or as a dedicated smartphone app (iOS and Android).

RESCLITE PRO SAFETY LUMINAIRE

Guides your way.

RESCLITE PRO guides people in an emergency safer and smarter than ever before. Thanks to innovative optics, this small powerhouse meets all the requirements of emergency lighting, combining minimalist design with the highest technical standards.

ESCAPE-SIGN LUMINAIRES

signwebapp.zumtobel.com

Escape-sign luminaire app

Finding the perfect solution is quick and easy: with just a few clicks, the Zumtobel escape-sign luminaire app takes you to the best product for the application and enables simple lighting design for the ERI spots. The app is available in a web version and as a native app for iOS and Android.

ARTSIGN

The small design sensation.

ARTSIGN is the smallest escape sign luminaire in the Zumtobel portfolio. With a recognition range of 15 m, it is roughly the size of a postcard and blends harmoniously into any room. LED technology supports reliable operation over a long life time with absolutely no maintenance.

zumtobel.com/artsign

IP40

Recognition distance 15m

EN 1838 | DIN 4844

Design: Matteo Thun

COMSIGN

The peak of LED technology.

COMSIGN is simply perfect – in many ways. Thanks to the transparent acrylic glass, the luminaire appears to float in the room. A surface-mounted element in high-quality aluminium rounds off the delicate design. The gently curved wedge shape takes on both aesthetic and functional tasks.

zumbobel.com/comsign

PURESIGN

Great lighting technology in a slender design.

Zumbobel has collaborated with the renowned EOOS design studio to develop emergency sign luminaires that fuse clear functionality with an elegant design – a look so sophisticated that PURESIGN won the iF Design Award. Boasting a width of just 20 mm, this slimline luminaire is strikingly elegant, even in the duplex version.

CROSSIGN

A multitalent for every application.

Equipped with the latest LED technology, the CROSSIGN all-rounder is fully prepared for a highly efficient future. The specially developed PMMA lens distributes the light uniformly across the entire pictogramme.

zumbobel.com/crossign

ECOSIGN

The highly flexible all-rounder.

The all-rounder of the Zumtobel escape sign luminaire portfolio combines many different qualities in a single luminaire. Whether in industrial warehouses or car parks, a high degree of protection means that the ECOSIGN is well equipped for any application. With a recognition range of 32 metres, a variety of installation options and tool-free maintenance, this solution is flexible in every way.

CUBESIGN

Emergency sign cube for large-scale marking of escape routes.

With pictogrammes printed on three sides, this cube-shaped escape sign luminaire is the ideal solution for high halls and rooms. With a viewing range of 42 metres, CUBESIGN exploits the benefits of modern LED technology.

zumtobel.com/cubesign

IP40

Recognition distance 42m
EN 1838 | DIN 4844

zumtobel.com/prosettools

PROset tools:

PROset pen and PROset app

Thanks to the PROset technology, the luminaire can be addressed and configured contactlessly and in a matter of seconds. Simply attach the PROset pen or PROset app to the control gear, and the luminaire is configured.

SUPPLY SYSTEMS

ONLITE LOCAL

The emergency lighting system with self-contained power supply.

Self-contained emergency lighting systems have one feature in common – the battery fitted into every luminaire. In emergency operation, this provides the lamp with power so, for example, it can prevent panic reactions, ensure the safe evacuation of the workplace and illuminate the escape route.

zumtobel.com/ONLITE%20LOCAL

Small and medium-sized properties

Extremely easy to install

Auto test or system monitoring using DALI or Bluetooth®

NBOX

Magnificantly small group battery system.

A group battery system with dimensions as small as this is rare. Yet the nBox effortlessly outshines similar systems. With 48 V low voltage, state-of-the-art communication technologies and handy apps, technical variety is seen in its best light: Secure. Simple. And reliable.

zumtobel.com/central

Medium-sized properties

Extremely easy to install in the fire zone

System monitoring using POWERLINE

ONLITE CENTRAL EBOX

The efficient, intelligent central battery system that's extremely easy to install.

The ONLITE central eBox is a central battery system optimised for efficient LED technology. Both power consumption and the number of batteries required have been minimised.

zumtobel.com/ebox

Medium to large properties

Flexible modularity

System monitoring using DALI, POWERLINE or circuit monitoring

ONLITE CENTRAL CPS

Connected central battery system that adapts to your project.

As a modular system, this central battery system adapts precisely to the project and customer requirements as necessary. The system is available with DALI communication or as a circuit monitoring system.

REFURBISHMENT

Lighting refurbishment for the circular economy	156
Refurbishment kits	158
Pilot project for ReUse and High-Value-Recycling	160

The New York Times, New York | US

LIGHTING REFURBISHMENT FOR THE CIRCULAR ECONOMY

While the construction and early usage phase of a building is primarily about saving energy and reducing CO₂ emissions, being able to flexibly repurpose, redesign or modernise existing spaces becomes particularly important in the second phase of the building life cycle (Reduce, Reuse and Recycle).

connect.zumtobel.com/lighting-refurbishment-through-refurbishment-kits

Refurbishment kits

This flexibility is currently required for refurbishments needed due to the discontinuation of fluorescent and halogen lights within the EU by 2023, which stipulates a switch to more sustainable LED luminaires. For refurbishment projects in particular, Zumtobel offers lean solutions that achieve maximum added value with minimum effort: using refurbishment kits as special or standard solutions, for SLOTLIGHT, PANOS, ONDARIA, MIREL/MIRAL, CLEAN and pendant luminaires such as CLARIS for example, a key loop in the maintenance/upgrade cycle of the circular economy can be closed.

Advantages of the refurbishment kits

Instead of replacing the entire luminaire, the refurbishment kits mean that only parts need to be renewed or replaced. This has many advantages: existing resources remain in use in the long term. This promotes decarbonisation – and reduces costs. Because there's no need to invest in an entire new luminaire. The customer is also spared extensive refurbishment measures on the building because in many cases the ceiling does not have to be changed or damaged. The product stays on site and moves into a second phase of use. This renewal process

helps to improve the quality of light and reduce CO₂ emissions.

A look to the future

Zumtobel is already thinking ahead when it comes to the idea of the circular economy: more and more offers for taking back or reusing products are also being developed, such as with our partner Concular, at present active in Germany, Austria and Switzerland (partially).

District Administration Feldkirch, Feldkirch | AT

REFURBISHMENT KITS

MIREL and MIRAL

New MIREL luminaires with LED replace 1:1 the old fluorescent lamp versions. For asset preservation, project-specific refurbishment kits can be comfortably integrated into existing light chambers.

ZX and ZX2

For refurbishment existing ZX and ZX2 inserts are simply replaced by models with the latest LED technology. The selection includes optics from the TECTON C and MIREL product families as well as a free-emitting opal optic.

CLEAN

The LED refurbishment kits are a low-cost alternative for refurbishing CLEAN advanced or classic. The replacement is done quickly. Users benefit from improved light quality with lower maintenance and energy costs.

TECTON

TECTON offers tool-free refurbishment of fluorescent lamps to diverse LED solutions for new room and work requirements. In combination with safety luminaires, control components and sensors.

Graubündner Kantonalbank, Chur | CH
Before the refurbishment

Graubündner Kantonalbank, Chur | CH
After the refurbishment

SLOTLIGHT

For the simple changeover from a conventional T16 to an efficient and continuous LED solution, only LED battens and electrical cables need to be replaced before being securely closed with a new cover.

CLARIS evolution

The pendant luminaires can be easily replaced using the refurbishment kit. All mounting points and suspensions of the previous T16 model can still be used thanks to an adapter plate.

PANOS

Retrofit rings in various diameters enable old PANOS solutions to be quickly adapted to LED technology – without further measures on the ceiling.

ONDARIA

The resource-saving refurbishment of an ONDARIA T16 luminaire is carried out using a new LED device holder, which allows the existing housing to be retained.

PILOT PROJECT FOR REUSE AND HIGH-VALUE-RECYCLING

Working alongside Spar and carla Vorarlberg (a Caritas social enterprise), Zumtobel has reached a significant milestone in the reuse and high-value-recycling of TECTON luminaires and trunking. During the regeneration of Eurospar Lustenau and in close cooperation with the electrical installation company Klampfer as well as with carla Vorarlberg, TECTON luminaires and trunking units were carefully disassembled and installed in the Carla Vintage Store in Bregenz.

[sustainability.zumtobel.com/com-en/
our-sustainability-dimensions/
human-sustainability/pilot-project-eurospar](https://sustainability.zumtobel.com/com-en/our-sustainability-dimensions/human-sustainability/pilot-project-eurospar)

ReUse

In this product life cycle, the dismantled lights are tested for function and safety. If the luminaires were both functional and safe, they entered a second usage phase at the Carla Vintage Store in Bregenz.

High-value-recycling

The second recovery process focussed on the trunking materials used for the TECTON continuous-row lighting system. In this pilot project, the track materials were separated by type at the Dornbirn production plant. In collaboration with the supplier, the coated steel was reprocessed so that it can be recycled for the production of the next generation of TECTON luminaires.

72,4 kg of copper was recovered

91 kg of polypropylene was recovered

576 kg of steel was separated out and returned to the steel supplier

SERVICES

Light as a Service (LaaS)
Digital services

164
166

LIGHT AS A SERVICE

Light as a Service (LaaS) provides you with expert project management and turnkey lighting solutions from a single source. We will support you with project design and installation as well as throughout the entire operating life of your lighting system. This brings benefits for you not only in terms of sustainability, cost reduction and lighting controls but also in the form of the numerous possibilities offered by connectivity, system integration and digital services. Furthermore, lighting control and innovative luminaire technologies increase the quality of light and space as well as energy efficiency. LaaS also offers an innovative financial option: you can choose to rent your lighting at fixed monthly rates, avoiding high upfront investment costs.

Site audit (analysis)

We will visit your site to evaluate potential savings in energy costs and CO₂ emissions. This includes inspecting the lighting installation with a focus on energy efficiency, light quality and compliance with norms and regulations.

Turnkey services

Project management from project design to commissioning. Throughout the entire life cycle, we'll ensure the best light in your company. All from a single source.

Subsidy Management

We will advise you about available funding opportunities and support you with your grant applications if you wish.

Project design

We will provide you with individual support throughout the project design phase – from initial ideas to the final design. This can also include future digitisation steps, for example.

Installation

We will take care of the installation process – from removing and recycling the old luminaires to delivering and installing the new lighting.

Operation

We will ensure that your lighting system works perfectly – throughout the entire agreed period.

DIGITAL SERVICES

A high density of luminaires in buildings provides the ideal basis for collecting data from in-built sensors. Using the lighting network as the foundation for the Internet of Things has many benefits: sensors can be directly installed in luminaires and thus supplied with power. The lighting network can operate as a closed network and so offers an extremely high level of security and very low risk of interruption. In addition, the high bandwidth means that a large amount of data can be collected.

We provide various digital services based on this concept.

Ambient sensing

Sensors that can be easily integrated into the lighting infrastructure provide valuable information on temperature, humidity and air quality, as well as noise levels.

Asset tracking

Find, don't search. Locate important assets in real time via the lighting infrastructure.

Geo notification

Get ahead of the competition. Use these location-based services to interact with your customers in a personalised way.

Indoor navigation

Create a fantastic shopping experience for your customers and new POS possibilities for your company with the help of the lighting infrastructure.

Light fidelity

For enhanced productivity, improved security and more possibilities. Use your lighting infrastructure for secure and uninterrupted data transfer.

Remote monitoring

Optimal building use, real-time identification of faults, efficient energy use – all this can be documented and controlled both on site and remotely.

Space & desk management

Data that is collected from the lighting infrastructure gives you important information on how you can make your spatial planning more efficient.

Store analytics

Collect valuable information about how long your customers stay in your sales area and what their movement patterns are. Locate hotspots for promotions or use the data to prevent large numbers of people from gathering in one place as a health and safety precaution.
